CONTEXTUAL PROSODIC THEORY: 
BRINGING SEMANTIC PROSODIES TO LIFE

Bill LOUW

(Texte paru dans Words in Context, A tribute to John Sinclair 
On his Retirement, Edited by Chris Heffer and Helen Sauntson, 
december 2000, Cédérom ISBN 0 70 442 1666)

Bill Louw has lectured English Language at the University of Zimbabwe for more than 30 years. His research interests involve the application of corpus linguistics to stylistics and literacy. He has published on semantic prosodies and data assisted approaches to literary criticism. He directed the video-led Zimbabwe LITRAID Distance Education course for teachers in partnership with the Open University in the UK.

Hawk Roosting

I sit in the top of the wood, my eyes closed.
Inaction, no falsifying dream
Between my hooked head and hooked feet:
Or in sleep rehearse perfect kills and eat.
The convenience of the high trees!
The air's buoyancy and the sun's ray
Are of advantage to me;
And the earth's face upward for my inspection.

My feet are locked upon the rough bark.
It took the whole of Creation
To produce my foot, my each feather:
Now I hold Creation in my foot

Or fly up, and revolve it all slowly -
I kill where I please because it is all mine.
There is no sophistry in my body:
My manners are tearing off heads -

The allotment of death.
For the one path of my flight is direct
Through the bones of the living.
No arguments assert my right:

The sun is behind me.
Nothing has changed since I began.
My eye has permitted no change.
I am going to keep things like this.

(Ted Hughes 1957)
1. Introduction
John Sinclair's pioneering work on what have come to be known as semantic prosodies has, since the advent of the volume Text and Technology (Baker et al 1993), attracted the attention of scholars both within corpus linguistics and beyond. Most writers who have commented upon semantic prosodies have recognised that they are a collocational phenomenon and one which is preferably to be regarded as recoverable computationally from large language corpora rather than intuitively. Sinclair (1996: 75) demonstrated something of the interface between semantic prosodies and their role in determining units of meaning. His recent work has come closer to providing us with a working definition of semantic prosodies. He says of them:

A semantic prosody is attitudinal and on the pragmatic side of the semantics/pragmatics continuum...once noticed among the variety of expression, it is immediately clear that the semantic prosody has a leading role to play in the integration of an item with its surroundings. It expresses something close to the ‘function’ of an item. (1966: 87)

Stubbs (1996: 173) has amplified the involvement of strongly negative semantic prosodies in causation. In 40,000 examples of the lemma cause, Stubbs reports that its most characteristic collocates are: accident, concern, damage, death and trouble. Jeffries (1996: 171), writing as a stylistician, favours the view, unpopular with many literary critics, that semantic prosodies are an intertextual rather than a purely intratextual phenomenon within a work of art. In other words, semantic prosodies are part of all readers' prior knowledge. Mercer (forthcoming) writing from the perspective of an educational theorist in the mentalist tradition suggests a possible area of rapprochement between corpora as they affect semantic prosodies and the workings of the mind.

The purpose of this paper is twofold: (1) to review our current state of knowledge of semantic prosodies, move towards a revised working definition of the term and summarise the major issues which are still to be resolved; and (2) to demonstrate the presence of corpus-based evidence to support a link, at the level of linguistic theory, between the linguistic contexts of semantic prosodies and their situational counterparts. A Contextual Prosodic Theory (CPT) would seek to elucidate through semantic prosodies the Firthian view that situational and linguistic contexts are co-extensive. The work of John Sinclair, arguably more than that of any other Neo-Firthian linguist, is demonstrably underpinned by this view. The move towards Contextual Prosodic Theory follows logically upon Sinclair's assertion:

Having arrived at the semantic prosody, we have probably come close to the boundary of the lexical item. (1996: 88)

2. Our current understanding of semantic prosodies
When scholars compare the peculiar power of written text with that of the visual media, the single feature which is commonly identified as text's main strength is that it is connotative. The fact that pictures are denotative is often seen as a weakness, because they leave too little to the imagination. Hence, the visual medium is regarded as being too iconic for its own good, whilst the richly suggestive qualities of text continue to be revered as they sustain the complex art of literary appreciation.

2.1 Are semantic prosodies a form of connotation?
We need to make it plain that semantic prosodies are not merely connotational. The COBUILD definition of connotation runs as follows:
The connotations of a particular word or name are the ideas or qualities which it makes you think of. (1995: 343)

One of the examples provided in the dictionary entry reads:

‘Urchin’, with its connotations of mischievousness, may not be a particularly apt word.

However, suppose we were to ask the average reader what the connotations of the phrasal verb build + up are? Is that reader likely to reply with the question: ‘Transitive or intransitive?’ Is connotation ever subjected to this type of rigorous precondition? Is connotation too loosely intuitive ever to prompt this sort of question? Connotation was rightly considered sufficiently important to operate at a high level of computational and lexicographic abstractness in the first edition of the COBUILD dictionary (1987) as the following examples attest:

A housebreaker is someone who enters another person’s house...in order to steal their possessions.

A house guest is a person who is staying at someone’s house for a period of time. (1987: 706) (emphasis added, although read with hindsight, someone’s house may have required revision if that particular dictionary were being written after the advent of semantic prosodies)

Whereas knowledge of connotations is often a form of schematic knowledge (see Bartlett 1932; Minsky 1977 and Stubbs, this collection) of repeatable events, e.g. what urchins do, where they live, their financial means or lack of it and how they behave, etc, semantic prosodies are more strictly functional or attitudinal. They relate more directly to what literary critics call authorial tone and are supported by a series of collocates such as those mentioned earlier in Stubbs’ analysis of cause. These are sufficiently monolithically negative for the introduction of a positive collocate, e.g. joy, to make a powerful adjustment to the tone: it becomes ironic if the choice of joy was deliberate or insincere if it was inadvertent. The force behind semantic prosodies is more strongly collocational than the schematic aspects of connotation. Most semantic prosodies accumulate and concentrate their power within the nine-word window of acknowledged collocational force.

On the other hand, the reversal of schematic knowledge is insufficient to identify a semantic prosody. For example, all weddings are meant to be happy and all funerals sad. Hence, when Philip Larkin describes The Whitsun Weddings as being ‘... like a happy funeral...’, he is reversing a connotative pattern and not a semantic prosody. Literary critics are thrown back upon traditional labels such as simile and oxymoron in order to cope with the phenomenon.

Other aspects of our current understanding of semantic prosodies will bear upon the question of connotation and these will be referred to as we reach them below.

2.2 All of the semantic prosodies in the language ought to be recoverable by computational means

The recovery of semantic prosodies computationally is not a simple or straightforward matter. Knowing that semantic prosodies are attitudinal, pragmatic and functional does not take the investigator very far down the path of providing specific instructions to the computer's searching software. However, a number of avenues of approach can be opened up in the expectation that as each begins to yield data in ever larger quantities, software can be developed in order to link and integrate the methods for finding semantic prosodies.

Most investigators would wish to begin with the criterion of frequency and this is proposed in greater detail in Section 4 below, with the potential for discovering forms of prosodic activity even within the most frequent forms in the Bank of English, such as a.
Even forms which we consider free-standing and uncontroversially prosodic such as *happen* are dependent for much their prosodic power upon the fact that their subject is effectively deleted or remains latent or only potential. The proxy form and frequent collocate *something* almost seems to direct much of the prosodic power of *happen* by creating a fractured context of situation which human beings find disquieting (see Section 4 below). Note that even where forms with *some* are in the object position and well away from *happen* their prosodic power survives. All forms that begin with *some* inject into a text or situation a sinister indeterminateness which invites interrogation, inference and which drives the reader towards resolution. This can be immensely powerful in literary texts: refer to the line with which this paper concludes.

So we see that the collocates of known prosodies are likely to assist in the process of their computational recovery. This process may be assisted by the fact that in some cases, especially where a prosody reflects human foibles or popular culture, there may be a clutch of grammatically related collocates which can assist the investigator. Hence, a computer programmer can begin to craft software which links instances where prosodies proceed through narrow grammatical defiles. Appendix 1, for example, shows the output of COBUILD’s programme called ‘picture’ for the form *ended up*.

If one concordances for *ended up looking* (Appendix 2) the prosody is easier to see. Because semantic prosodies are functional, it is always useful to state the function of the prosody. Here the function is to express irritation at situations which leave a human being's image or status impaired. The irritation also extends to the instances of insincerity. For example, the irritation in line 3 is that some people thrive on adversity.

2.3 Semantic prosodies are often ‘positive’ or ‘negative’ and negative semantic prosodies are much more frequent than positive ones
The fact that negative prosodies are more frequent than positive ones ought not to surprise us greatly. In the same way that unrequited love forms most of the subject matter for the greatest love poetry in English and not requited love (with the superb exception of John Donne's *The Good Morrow*), we ought not to be surprised to find that contented human beings utter much less than discontented ones. Besides, requited love is a fairly busy and time consuming state and one which is as inimical to the act of writing. However, if fracture and discord are the basis of unhappy contexts of situation, then the over-provision of intimacy, comfort, food, drink and possessions are likely to form the basis of contented situations. John Sinclair long ago indicated to the author (personal communication) that the author might find the positive prosodies clustering around forms such as *warm*.

The concordance for *warmth and* bears this out and creates scope for the investigation of positive prosodies with objectivity rather than schmaltz. However, it should be noted that this concordance for *warmth and* (Appendix 3) does not single out a semantic prosody, because its authorial function hardly rises above the banal and it fails too on the related criterion of pragmatism. It is a good example, however, of the strong provision of connotation.

A theoretical position with regard to positive and negative prosodies is postulated in more detail in Section 4 below.

2.4 Semantic prosodies demonstrate some relationship with transitivity
Semantic prosodies demonstrate some relationship with transitivity and in the case of *build up*, at least, this relationship is demonstrably consistent computationally within large corpora. Louw (1993) points out that where human beings are in control of their own destiny and are shaping it transitively for themselves, the semantic prosody is positive, but where people are at the mercy of forces beyond their control, the things which build up intransitively are negative and uniformly threatening. Appendices 4 and 5 show some KWIC concordances for *build + up + of* and *build + up + a* which demonstrate the phenomenon. The nominal form with *of* (Appendix 4) presents us with an impressive array of the products of the intransitive form in action.
The transitive form followed by a (Appendix 5) provides an insight into those aspects of life’s rich pageant which people can build up for themselves. Note that the relative absence of ironic forms is due to the fact that only perverse and dangerous people deliberately build up bad things. If the corpus were captured from the records of secret service dark operations or from the washroom conversations of the operatives one encounters in spy thrillers, one might well discover forms such as: ‘We must build up more resentment in the community.’ To reverse the prosody in this concordance is to flag an evil motive. Only citations 6, 7 and especially 116 appear to come close to this and the presence of a motive would need to be verified from an extended context (which this author is unable to access remotely from his country!).

Sinclair (1990) offers an early reference to semantic prosodies in the form break out, with the explanation:

A set of real examples may show, collectively, aspects of the language that are not obvious individually.

The moment work stops, disorder is liable to break out.
If he gets promoted, all hell will break out.
This caused an epidemic to break out among them.
This final destructive fever had to break out somewhere.

Note that it is bad things that break out, not good ones. Any such points emerging from a set of constructed examples could not, of course, be trusted. (1990: xi)

Ten years later, a transitive set of break out followed by the from the Bank of English can be used to bear out the involvement of transitivity in semantic prosodies, with the stronger ironies on lines 1 and 46 (Appendix 6):

It is clear that the link between semantic prosodies and transitivity is very old and, for this reason, very reliable. A great deal of productive work is now possible in the area of semantic prosodies and transitivity and much of this will be assisted computationally through the use of parsed and tagged corpora.

2.5 Semantic prosodies operate in a binary relationship between irony and insincerity and only the choice of irony is fully advertent.
In the case of irony, there is always some well calculated collocational deviance from a SP present. However, rather than some ‘value-added’ phenomenon like the Russian Formalists’ ostranenie or ‘making strange or difficult’ for poetic effect, the deviance from an SP, because it is collocational, operates in ways which make our intuition move more slowly as we unravel the meaning. Also present is the Aristotelian criterion that the process of unravelling will always contain overtones of mockery. Moon (1998: 161, 256) offers the superb example from the Bank of English:

President Clinton fanned the flames of optimism in Northern Ireland. (Appendix 7: line 42)

The conclusion we reach as we unravel this line becomes an act of critical literacy. For a split second the form is rejected as incoherent on the basis that optimism bears no resemblance to the normal collocates of this fixed expression. However, within a further split second, the critical message of the writer is unravelled: the peace process is, ironically, almost as aggressive as the war it is designed to end. The line has to be an intentional comment on US foreign policy. The power to reach this conclusion can only come from the fact that our prior knowledge grasps the purport and drift of all of the collocates to the right of this fixed expression as part of the act of reading (see line 42). Part of the interpretation process, too, is the exclusion of embers during the reasoning process: this consolidates the question of advertency on the part of the author. This is confirmed elsewhere in the same concordance by the appearance of a second ironic form, life at line 38. However, the corpus
offers us what has never been possible before: the ability to verify and explain in detail how the phenomenon works. This marks the much awaited advent of instrumentation in language study. The power of the Information Age lies not in the information but in the altered act of reading.

Some measure of just how delexical the expression is, may be gauged from the fact that only one reference to real, literal flames rather than figurative ones occurs in the entire concordance (line 59). This offers a further indication that Lakoff and Johnson (1980: 4) would do well to appreciate that ‘the metaphors we live by’ are all delexical. The implications for Hallidayan ‘grammatical’ metaphor are no different. Those ‘metaphors’ we intuitively think we live by may also be offered solely in order to act as part of a constellation of prosodies, where the intention is merely to provide what must be regarded as atmospheric support in the form of a cluster of prosodies all of which have the same functional, attitudinal and pragmatic aim (see Karter’s racing report quoted in 2.7 below).

2.6 Semantic prosodies frequently operate in the presence of reflexive forms and often do so ironically and to express disapproval and irritation.

We have already seen in 2.2 above that end + up + *ing offers us evidence of the irritation human beings feel when pragmatic situations, especially those which were ‘full of’ promise, suffer a reversal which causes them loss of face and humiliation. The diligent SP taxonomist of the future would find a fair number of them through the form up: finish + up and wind + up are cases in point. Participial forms such as faced + with and forms which act as a situational fulcrum such as only + to + be + *ed will assist in filling out this area of semantic prosodies.

However, the same functional component of the SP perseveres in many reflexive forms. This is especially the case where the speaker/writer’s tone is one of irritation at the mismatch between the rich promise which was expected of a situational outcome and the hazardous and humiliating scenario which has or is likely to take its place. The SP often expresses irritation at the fact that individuals have to extricate themselves from a particular situation. The irritation may be caused by the fact that some dilatory conduct in an individual requires fairly drastic forms of repair. The irritation may also appear as a warning. The form get + *self + *ed (Appendix 8) carries the prosody fairly strongly. Note that it does not carry all of the prosody: in the case of herself, the term pregnant is frequent as a negative and often secretly envious evaluation.

The situational irony is altogether stronger and more poignant in the case of semantic prosodies involving reflexives. The situations often involve disagreeable aspects of human nature. In Section 4 below we see how the characterisation of SP reflects the characters of the human participants. Firth had the foresight to include the term personalities in his taxonomy of context of situation. So, when Sinclair speaks of a ‘semantic prosody of reluctance- inability’ in relation to the form true feelings (1996: 90), his observation is subsumed by Firth’s term ...persons, personalities. Equally, in relation to the monolithically negative prosody in the form brook (1996: 91), Sinclair’s reference to the intransigence of leaders and their propensity to threaten, is also covered by Firth’s term ...persons, personalities.

Human nature is particularly reluctant to reward success, as the reflexive prosody victim + of + 3own reflects in Appendix 9. Note the ferocity with which it applies to success in business in a globalised world. Most of these references follow its + own + success below. It is in evidence of this kind that we see very clearly the co-extensive nature of situational and verbal irony.

2.7 Semantic prosodies ‘hunt in packs’ like those of kinesics.

Semantic prosodies ‘hunt in packs’ like those of kinesics and a single occurrence of a semantic prosody is rarer than the appearance of several whose lexical content is collectively subservient to the expression of an attitude. Speakers and writers will usually avoid any lexical similarities between component semantic prosodies in a single constellation or ‘pack’ as such similarities might revive full lexical status in the perception of the reader/hearer.
Poetry on the other hand relies for the creation of imagery on the fact that, as Jakobson explains: ‘...the poetic function projects the principle of equivalence from the axis of selection into the axis of combination’ (1960: 358). Louw (forthcoming) offered the following extract to demonstrate that its author tries (not entirely successfully) to keep his negative semantic prosodies lexically disparate. This type of phenomenon in extended text is likely to have far-reaching consequences for the Hallidayan notion of ‘grammatical metaphor’ which has apparently been constructed, like those of Lakoff and Johnson, from single sentence citation forms (see Halliday 1985, 1994).

Racing: Haines takes reins for sweet surgery

By JOHN KARTER, Racing Correspondent

THE much-maligned men of the Jockey Club have found a 'sugar daddy' to boost their image with a little cosmetic surgery. That has been the typically cynical reaction to the appointment of Christopher Haines, a high-flyer from the sugar industry, as the Club's first ever chief executive.

Constructive criticism is a healthy thing, particularly where a self-electing body like the Jockey Club is concerned. However, the type of cynicism greeting the arrival of Haines, who was officially introduced to the media yesterday on his second day in office, smacks very much of a "Pavlov's dogs" response which assumes every move the Club makes is anachronistic and autocratic and therefore automatically to be shot down in flames."

(The Independent, 4 October 1989)

2.8 Semantic prosodies are often delexical and may appear in fixed expressions. The ability to recognise semantic prosodies intuitively often depends upon the grammatical constructions in which they are embedded.

Semantic prosodies are likely to be progressively delexical, frequent and may often be recovered within fixed expressions. Their positive or negative status is akin to what historical semanticists like Ullmann (1962: 231) refer to as ameliorative or pejorative semantic change. Such change carries with it the phenomenon of delexicalisation. In the case of semantic prosodies, one is dealing with forms which are functional, attitudinal and pragmatic rather than purely lexical. Hence a form like take is both frequent and delexicalised, but it has no prosodic function. It is significant, by comparison, that in fan* + the + flames as it is extracted from the Bank of English, only one instance in 69 carries a reference to flames that are literal. Hence, the prosody of disapproval is carried by an expression which, because it is monolithically negative and frequent and attitudinal, and forms part of prior knowledge. However, ironically, the single literal form is made to look like a cliché! This is evidence of the fact that readers' prior knowledge assembled into the future by data-assisted means will add a totally new dimension to what was an intuitive preserve.

Here is a further example. In the city in which the author lives, a fleet of delivery trucks carries the following message painted on all of its trucks: 'Another Load of Crystal Candy and Cadbury's Chocolate Being Delivered.' To the author of the message, the term load carries the fully lexical meaning as it is understood on a daily basis by the owner of a sweet factory: a delivery involves the transportation of a load.

However, note the way in which the literal message is undermined by the delexical and negatively prosodic status of load of (Appendix 10). Chocolate sits peculiarly uneasily with some of the collocates to the right of the expression. Yet the writer of the message is blithely oblivious of the surrounding delexical menace.

One might have thought that the syntax of load of would have been sufficiently compelling to forestall the painting of the message onto the vehicles, but the gap between the fully lexical and the delexical is much more opaque than Lakoff and Johnson or even Halliday would have us believe. After all, it forms the mainspring for some of our most respected humour:
Ronnie Barker: But now a sketch set in Frankenstein’s castle in which I take the all important part of the monster.

Ronnie Corbett: And I make him put it back! (Vincent 1977: 26, emphasis added)

It is precisely the opacity of many semantic prosodies at the level of intuition that provides the excitement for the data-assisted literary critic. Louw (1997: 242) offers an analysis of gives rise to in a poem by Philip Larkin. Larkin's line is:

...Strange reciprocity,
The circumstance we cause,
In time gives rise to us,
Becomes our memory.

Larkin's intuition far outstrips that of ordinary readers. The form gives rise to, once verified from the corpus, is found to be monolithically negative, but our intuition has difficulty seeing this.

Semantic prosodies will be amenable to recognition intuitively only where the dictates of grammatical structure foster this and possibly not even then (see Louw's example of without feeling 1993: 175). Here human intuition assigns nominal rather than verbal status to a citation form. The distance of the citation form offered from a sentence boundary will probably have a role in this process. It is risible to suggest that we ought to remain made-up-example mentalists with an aversion for offering an opinion on anything too far from a sentence boundary.

2.9 A working definition of semantic prosodies
A semantic prosody refers to a form of meaning which is established through the proximity of a consistent series of collocates, often characterisable as positive or negative, and whose primary function is the expression of the attitude of its speaker or writer towards some pragmatic situation. A secondary, although no less important attitudinal function of semantic prosodies is the creation of irony through the deliberate injection of a form which clashes with the prosody's consistent series of collocates. Where such reversals are inadvertent they are indicative of the speaker's or writer's insincerity. Semantic prosodies may also be found where the integrity of normal contexts of situation are fractured: (1) through the use of delexical apparent metaphors and learned expressions, whose force, over a period of time, has effectively been to delete human participants from contexts of situation, through their conversion into and replacement by certain desirable or undesirable human characteristics; and (2) through the use of forms of language which mark incomplete contexts of situation or those which are threatened with some form of fracture through the occurrence of some event which is either caused or spontaneous. The extent to which semantic prosodies are co-extensive with contexts of situation is verifiably determinable by and through Contextual Prosodic Theory (CPT) (see Section 4 below).

3. Issues still outstanding in the investigation of semantic prosodies
Semantic prosodies are not easily accounted for within existing taxonomies of language function. For example, according to Jakobson's quasi-formalist Prague School taxonomy, semantic prosodies would slip through the net: irony would straddle his poetic and emotive functions and, on occasion, the phatic function as well. No provision is made by Jakobson for the capture taxonomically of insincerity and play in language or the ability of human intuition to recognise them.

Yet interest in the diagnostic applications of semantic prosodies continues to grow, based on the premise suggested by Louw (1993) that when we are being insincere, the prosodies
we place into our text, **write** us. Even mentalist linguists have been at pains to express something of the possibility that certain aspects of language appear to offer a deep and plausible link with the emotions of a community and aspects of its popular culture.

If there are metaphors we live by, they are all likely to be found to be delexical and a bottom up approach to the subject is likely to reveal colossal mismatches between intuition and the direct observation of authentic data. For example, a search of the term *argument* reveals that arguments are statistically more complex and multi-faceted than they are steeped in the hoary metaphors of war as Lakoff and Johnson (1980: 4) blithely suppose.

### 3.1 The affective aspect of semantic prosodies

Semantic prosodies often betray a speaker/writer's attitude and appear to operate almost as a verbal kinesic in much the same way as kinesic clusters and constellations have been demonstrated to operate in the work of Morris (1977) and Birdwhistell (1971) on body language. In the same way that body language is considered a reliable marker of a speaker's attitude, because kinesic activity is a 'vestigial' remnant of man's ancient link with the higher primates, semantic prosodies may equally be difficult to fake with any apparent authenticity. They may have the status of a verbal kinesic.

Where groups recognise the negative aspects of a prosody and wish, for ideological reasons to reverse it, they may take steps at the level of policy in order to do so. A case in point is the movement which supports euthanasia. They recognise that to *cause* death is less satisfactory from their point of view than it is to bring it about. The following small number of instances appear in the Bank of English.

<table>
<thead>
<tr>
<th>invasive event&quot; which is designed to bring about death rather than the</th>
<th>bring about death. &lt;p&gt; A later act of bringing about death and destruction of</th>
<th>bring about death. The right being to bring about death. Basic care--food, to bring about death, and families would</th>
</tr>
</thead>
<tbody>
<tr>
<td>even if such action is likely to bring about death.</td>
<td>Secondly, they bring about death and destruction of</td>
<td>bring about death.</td>
</tr>
<tr>
<td>he said.</td>
<td>or using some other means</td>
<td></td>
</tr>
<tr>
<td>issue of removing food and fluids</td>
<td>be openly and readily available</td>
<td></td>
</tr>
</tbody>
</table>

Semantic prosodies are also associated with affective factors which culminate in forms of insincerity (see examples of racism, suasive text etc in the extended contexts of a recipe for success in Appendix 11 to be discussed below). In extreme cases semantic prosodies are affected by psychiatric trauma. Psychiatric patients who had waived their rights to justice at South Africa's Truth and Reconciliation Commission (TRC) hearings were asked to comment on the work of the TRC. Several referred to it as a good organisation:

> The (commission's) idea that speaking out *causes healing* is a wonderful one. *(New Nation, 19 April 1996, emphasis added)*

The only instance of the same form in the Bank of English would tend to align this outcome of the TRC's work with forms of trickery and magic:

> family for support, eased their minds as well as their bodies. When Thenotte kept watch all night outside the sick woman's house, she focused the neighborhood's attention on the patient's suffering, a process of support that might in itself *cause healing*. The effect of the healer-diviners on their communities cannot be underestimated. One English healer had forty customers a week; it was said that people traveled twenty to forty miles to consult a witch. Elizabeth Cracklow of Oxfordshire had been
3.2 Differences between spoken and written corpora

No serious investigation of differences between spoken and written instances of semantic prosodies has so far been attempted. There may well be subtle differences and the extent to which these are due to issues of corpus development rather than mode of discourse will need to be investigated. The following is a brief KWIC concordance for all sorts of from the spoken corpus. The sampling of the spoken language of senior citizens may have captured the 'halo effect' of retrospection in old age. This would need to be verified and differentiated from the possibility of their having been caused by a semantic shift within the space of a generation.

4. Towards a contextual prosodic theory (CPT)

The fact that semantic prosodies are part of all of us rather than quasi-literary inventions is my point of departure for an attempt to see if they can sustain, albeit mildly, the status of a linguistic theory.

An area of neglect (caused by genuine puzzlement over a number of years) in the work on semantic prosodies has been the failure of investigators, this author included, to propose some means of finding all of the semantic prosodies in the language, and that, preferably by computational means.

However, for semantic prosodies to attain the status of theory, vulnerable statements, of a strictly Popperian type, will not only have to be made about how they work, but such statements will also need to be proved correct. Sir Karl Popper (1963) points out that it is the first duty of the scientist to ensure that his claims are potentially falsifiable.

4.1 Does situational meaning drive grammar?

In this regard, some preliminary work has already been done. Louw (1993: 171) refers to the fact that the positive as opposed to the negative prosody on build up is driven by the presence or absence of transitivity. Taking the matter further means that one is forced to confront the issue of whether, as averred by Chomsky:
...grammar is autonomous and independent of meaning... (1957: 17)
and that corpus data is flawed (1964: 207).

or whether in the Malinowskian spirit of Firthian and Neo-Firthian investigation, situational meaning is likely to be found to be inextricably related to grammar. Advances have been slow. More than half of the community of linguists rejected all authentic evidence and spent fifty years evolving a complicated notation for the description of made up examples.

This brings us to the issue behind the poem, Hawk Roosting with which this article begins. In this poem, Hughes shows us a fictional world presided over by a hawk which has evolved to a position of unchallenged supremacy. Man as hunter could offer a fatal challenge to this situation, but this is not stated by the poet. However, the world in which the hawk lives would be challenged instantly if one were to proceed down the list of word frequencies from COBUILD, threatening as one went, to add the next word listed there to this poem. The challenge would occur as early as position 5. One cannot add the word a to the poem without destroying the hawk’s universe.

In the same way, one needs to ask where, in terms of descending frequency, falcomorphic man's sense of security might begin to feel challenged and express itself in the presence or absence of linguistic data? If it is the role of a to introduce new elements into a context of situation, then the same homo sapiens who is awed by build-ups which are not of his/her own making, is likely find new developments threatening by and large. If the change of prosody brought about by the presence or absence of transitivity can drive meaning to the extent that acts lose all positive reference, warmth and rapport when man is not the actor, then one should indeed begin the search for semantic prosodies as early as position 5 in the descending frequency list, if not earlier.

New events of great suddenness ought to carry with them some indication of the tremor in the human domain that they engender. The term heart + attack is a case in point. The fact that a almost always precedes the form heart attack and hardly ever the form the, would be regarded as little more than grammatical choice within the noun phrase by the followers of Chomsky. The fact that proportions of the + dog to a + dog are never challenged allows the expectation perhaps of one occurring as against the other to settle at around fifty-fifty.

Yet, if one asks someone in the street why it is that heart attacks never attract a second reference, the answer is likely to be quick in coming: because they are followed both in language and in life by the collocate or the event: death. Inviting one's interlocutor to recall a particular heart attack is both discourteous and insensitive. Only insensitive busybodies quiz the bereaved (see the COBUILD ‘picture’ file for heart + attack).

The management of data surrounding the fifth most frequent form in the language would be a huge undertaking. Yet, if we follow the lead given us by delexicalisation in fixed expressions like fan + the + flames, fixed expressions which involve the use of a might bear out the hypothesis central to the creation of a theory: that a involves events and expectations that human beings find situationally disquieting, simply because they are new. Our desired evolution towards comfort finds them as threatening as they would be to Hughes’ Hawk Roosting at the start of this paper, even if we shrink from admitting this. For the most part the occurrence of is might be like a knock at the front door, harmless most of the time, but, before the door has been opened, with key persons and personalities missing from its Firthian context of situation, palpable discomfort remains. Two delexical fixed expressions: the + recipe + for and a + recipe + for will be examined below.

Intuitively, we feel that the latter embodies a negative semantic prosody and intuitively we are even prepared to hazard a guess that disaster is the most likely collocate to the right. At this high level of frequency, involving a fixed or learned expression, intuition is not surprisingly more reliable. But what of the form the + recipe + for?

In attempting to confirm our theory, we need to hypothesise that if the form the + recipe + for + disaster occurs at all in the Bank of English, it will need to refer to a recurrent type of
disaster of which, almost perversely, we are both fully aware and whose occurrence we are powerless to avert. Gratifyingly, there is an occurrence in the corpus, but only one.

starting with the bankrupt TWA, but Murphy says bankruptcy and fare wars are not the only problems the industry faces. <p> KEVIN MURPHY, Morgan Stanley: The industry suffers from overcapacity. The recession plus over capacity in any industry is the recipe for disaster, so you just can't say well it was the bankrupt carriers, they caused havoc in the industry. No. It's a whole host of things. <p> RADKE: Another issue Congress will consider this week concerns Boeing's leading rival, the European

The hypothesis is borne out so far. It may sound perverse to say that the effects of the combination of the recession and overcapacity are sufficiently common and repeatable to be a disaster which is 'familiar' enough to attract the term the rather than a, but for an expert like Kevin Murphy with a firm of financial consultants, Morgan Stanley, this is very likely to be the case. Within his own economic schemata, overcapacity and recession are repeatable events and their behaviour in combination, to financial consultants, at any rate, is so familiar that it has lost a great deal of the fear of the unknown which the term a in this fixed expression always implies. A further source of fear for the proposer of a hypothesis is the occurrence of 23 instances in the corpus of a + recipe + for + success. A KWIC concordance for these appears below.

What, then would need to be wrong with these instances if the hypothesis is to be borne out? It would be tempting to use the argument of serendipity: not all newly arrived recipes herald disasters, because some must succeed albeit purely by chance. However, there is enough clear evidence for us to eschew that argument. At the very least, for the hypothesis to succeed, the expanded contexts for the concordance lines above would need to evince either of the criteria of insincerity or irony (Louw 1993) as a result of their having breached so substantially the negative semantic prosody. There is enough evidence and scope for a shout of 'Eureka!', but every line needs to be justified for the theory to hold water. The author is grateful to the editors for their generosity and forbearance in allowing the fully expanded contexts of a recipe for success to appear, with interpretive comments, as Appendix 11.
There is, of course, a great deal of *prima facie* evidence to demonstrate that the theory is upheld. In particular, the term *hardly* acts as a fulcrum for much of the irony, as do the negatives and a cluster of *but* to the right of the node. This can be further verified by the forms *synonymous* with *success* which the investigator obtains by concordancing for *hardly* and *not*.

5. Is Contextual Prosodic Theory new?
Contextual Prosodic Theory is confirmatory of the Firthian tradition rather than new. Such confirmation is particularly welcome at the turn of the millennium. Firth died in 1960. In that year the most powerful computer in the United Kingdom had little more than 10K of RAM (John Sinclair, personal communication). Firth could not verify his theories computationally, but when he gave us his taxonomy for the Context of Situation, he, and indirectly Malinowski, were really, unwittingly, giving us the key to semantic prosodies. Semantic prosodies arise
from fractured contexts of situation. If there are elements missing such as persons/personalities and/or relevant objects or even outcomes, negative semantic prosodies occur. Positive semantic prosodies are very likely the product of fracture through over-provision. Here is Firth's taxonomy:

A key concept in the technique of the London group is the concept of context of situation... The context of situation for Malinowski is an ordered series of events considered in rebus.

My view was, and still is, that "context of situation" is best used as a suitable schematic construct to apply to language events, and that it is a group of related categories at a different level from grammatical categories, but rather of the same abstract nature. A context of situation for linguistic work brings into relation the following categories:

A. The relevant features of participants: persons, personalities.
   (i) The verbal action of the participants.
   (ii) The non-verbal action of the participants.
B. The relevant objects.
C. The effect of the verbal action.

(Firth 1950, reprinted 1957)

Delexicalisation makes these fractured contexts appear to be metaphorical in Halliday's sense. For example, when the form greet has the human subject replaced by a characteristic such as cynicism, a negative semantic prosody results. It is worth noting that love cannot ordinarily act as the subject in order to convert the SP into a positive one, but its provision in jest satisfies the criterion of irony.

Just as negative semantic prosodies are the product of fractured contexts of situation, positive ones are the product of abundant over-provision. We see this in build up used transitively. Sybaritic (Appendix 12) prompts the sort of collocates to its right which show something of the quality of over-provision of people, objects and outcomes that human beings relish. Its prosodic status must be considered dubious precisely because no author has made bold to instantiate an irony against the monolith of positive collocates (with the possible exception of myopia, reminiscent of ‘Eyes Wide Shut’ below). However, its content will please and console those who find connotation a source of fascination.

6. Conclusion

Will Contextual Prosodic Theory tell us anything new about language and life? It will tell us more about the former and less about the latter. Human beings emerge just as we might have expected: selfish, comfort-loving, nea-phobic complainers – who are often insincere (and can now be outed diagnostically through semantic prosodies), but who have a well-cultivated sense of humour and use irony, apparently in jest, to invoke the momentary threat of the unusual.

However, human beings are fascinated by the extent to which their language can read them and they are unlikely to pass up the opportunity of seeing the fuller picture of the functionally attitudinal aspects of their lives as this is recovered from corpora. The technology for building irony and insincerity detectors ought not to take long in coming. Writers may even discover to their surprise that as they sit before their word processors, writing ‘of course, this has caused us both great joy’ they are confronted with a flag on the screen which says: ‘Are you perhaps being insincere? Or are you being deliberately ironic? Press any key to continue.’ Curiosity will secure the future of CPT.

What will the corpus linguist discover who ventures southwards down the descending word frequency list at the Bank of English, looking for contexts fractured or over-provided? Semantic prosodies will be there for the finding. Some of the frequent ones hunt in packs even within a particular literary work. Louw (forthcoming) shows how they dominate the creation of suspense in F. Scott Fitzgerald's The Great Gatsby, through the use of the term something, to show the lacunae in the lives of the persons and personalities yearning for ‘over-provision’ and they culminate in something's most celebrated collocate, the first semantic prosody noted by John Sinclair:
Even Gatsby could happen, without any particular wonder

Interpretive Notes
The expanded contexts below have been numbered for convenience of reference. The data divides itself into (1) Negative and weakly ironic forms with not, or hardly, or followed by but; or (2) disingenuous, insincere, suasive forms, involving weak humour. Many of these attempt to relexicalise the term recipe by providing collocates within the nine word window such as cooking up, kitchen, feast, and serves up. In context number 4 the further affective factor of racism may be present.

[1] it might not. I can only say there's a long way to go yet before I find out." <p> ANTHONY CLAVANE <p> Group classes begin again in the autumn. Individual tuition is all year round (0181-907 2715) <p> Going out 24 <h> Graduate Plus: Beefeater cooks up a recipe for success

SECRET a recipe for success

GEORGE Kirmos will give a treasured recipe to whoever buys his Georges International Reception Centre at Annerley on Brisbane's southside. Not that the sale is likely to need any incentives - it's just that so many guests

now in former Jugoslavia, for example. Unfortunately, should a land claim be successful, what are the Aborigines doing with it? Nothing, unless we also give them money, as has been proved so many times in the past. This is not necessarily a recipe for success. A friend suggested to me a long time ago, that we should Aborigines dollar; 1 million when they are born and stipulate they must look after themselves and don't ask for more. I dismissed the idea as a bit extravagant, but if one

there should be conflict between house and garden when it comes to cutting flowers.

A little extra care can prolong the life of cut flowers so that both gardener and interior decorator are happy with the results.

KITCHEN OF THE MONTH

A RECIPE FOR SUCCESS

Moving from a large and gracious Victorian house to a rather angular 1930s property meant that the Rhys-Evans family needed to thing carefully about what they wanted from each room. The kitchen was their top priority, as Linda

publisher, Frank, and his wife, Davina. With a busy job and hectic social life, Kate has little time for shopping and meals tend to be of the baked-beans variety.

Fortunately, home economist Berit had lots of advice, and her no-fuss feast proved a recipe for success. The well-planned menu lets you do most preparation in advance, so you can socialise instead of slaving in the kitchen and just add the finishing touches. Most important is to resist the temptation to impress with complicated dishes.

many franchisees may have failed. Anyone considering to go into franchising should guard against companies who are in financial difficulty and only selling units to raise capital. Do not fall for big name companies they are not always a recipe for success. Vital research and contact with BFA before making a decision to buy a franchise sounds a very sensible approach.

EDUCATION AND TRAINING

A future for SOAS

LONDON University's School of Oriental and African Studies is

cure-all # but have a specific purpose.

Supplements are added to the horse's diet to balance it - by filling in deficiencies of certain nutrients such as minerals, vitamins and amino-acids. It is important to realise that a supplement is not a recipe for success - it can only work if it does correct an imbalance or deficiency.

Horses likely to require a supplement are stabled performance horses, growing youngsters, broodmares in late pregnancy and early lactation, old horses and those

the inlet hose from the skin fitting and drop it into the bilge and you have a de-facto bilge pump.

But having to undo worm-drive clips and prise heavy-duty plastic pipe from a barbed inlet stub with water rising round your knees isn't much of a recipe for success. The proper answer is to fit a Y valve in the inlet tract with the second branch leading down into the bilge. Once you have done that, changing over becomes simply a matter of reaching down and turning a handle.
new discoveries. <p> PHOTOS WITH CAPTIONS </p> WHERE TO FIND THE FABRICS AND FURNISHINGS ON PAGES 90-97 <p> THE MODERN COUNTRY KITCHEN </p> AN IMAGINATIVE BLEND OF TRADITIONAL MATERIALS AND MODERN CONVENIENCE IS A RECIPE FOR SUCCESS IN THE KITCHEN. <p> THE CONRAN KITCHENS </p> Terence Conran’s kitchen in Provence (above) has two oak tables built specially for the room: one, made from an old gate post, is an excellent chopping table; the other is used for dining. <p>

process a little more friendly. We would not have been the people to follow Gary Hart." <p> A Hello! clone featuring only unknown members of a population group held by most Americans in only slightly higher esteem than lawyers? It hardly sounds like a recipe for success in the notoriously inhospitable mag-market. genes into subsequent generations. If you’re a parent, in some circumstances, a single brood, well nourished by your self-sacrifice, may pass on more copies of your genes than multiple malnourished broods. Putting mother on the menu may actually be a recipe for success. <p> Dr Martin Brookes is at the Galton Laboratory of University College, London The young spiders begin by sucking the blood of their mother from her leg-joints <p> OnLine: Sky high and ocean deep - Space / Satellites could soon be

and some US commanders (such as General Richard E. Cavazos, Commander US III Corps) began talking of battle in terms of a clash of wills (Romjue 1984, pp. 53 and 69). Finally AirLand Battle reintroduced the use of ‘principles of war”, not so much as a recipe for success but as a guide or checklist for battle. An initially lengthy list was cut to seven ‘combat imperatives” in 1982, which increased in 1986 to nine principles of war. These nine principles were: 1 Objective. A clearly defined and attainable

of a three-speed, providing better gas mileage on the highway. Our dealers will have a completely different perspective in six months," promises Hyundai's Mr. Warner. Others, though, aren't so sure that budget cars from the Third World provide a recipe for success in the U.S # especially after consumers' disappointments with the first wave of products. People's desires are shifting upward,” says Yoshinori Taura, president of Mazda Motor of America, the Japanese auto maker's U.S. sales arm. Even

33 for every dollar; 1 it invests in education. In-house promotion decreases the likelihood of a misunderstanding between shop floor and boardroom. At Nordstrom, even MBAs have to start off as sales assistants. <p> If being nice to people is such a recipe for success, why isn't everybody doing it? After all, most bosses would prefer, other things being equal, to win friends by pouring money into pay, perks and training for their workers. One problem is that many people have a vested interest in

and enthusing, mainly supported by information technology, which are visually and emotionally stimulating in the way that chalk and talk seldom is. <p> It may be that teachers could be better and do better but going back over the old ground is not a recipe for success. As a teacher, I considered inattention in the classroom as largely my fault. If a fraction of the effort we put into suitably motivating the most keen were put into suitably motivating the less keen we might make a dent in the wastage we

ball, revolutionary short-game exponents. Ballesteros, Couples and Bernhard Langer have all had games genetically engineered for the Masters, while Nick Faldo and Jose-Maria Olazabal, theoretically at least, have not. <p> Billy Casper believed that a recipe for success was more important. In 1969, he combined several carefully considered ingredients don't attack the pins, do lay up at the long 13th and 15th holes and lost to George Archer, who faded the ball, went at the flags with youthful gusto and was
enjoyment as much as career guidelines. That way you are likely to get good results. You can always do a postgraduate vocational qualification. Academic success does not mean hands-on experience is redundant. "Generally, a combination of both is a recipe for success," says Mr Dugdale. The key is self-assessment based on interests, values, aptitudes, and personality quirks. Dr Bernard Kingston, director of the careers advisory service at the University of Sheffield, says: "You have to balance your

Rank does intend to exploit growing cinema audiences. It recently backed Widow's Peak, a British movie set in the Twenties, starring Joan Plowright, Natasha Richardson and Mia Farrow. The shares leapt 15p to 1089p. Alpha serves up a recipe for success; City

s students, and the trio find themselves caught up in spiral of betrayal and deception. Atmospheric, but a obvious if you think about it just a little # PUTTING Dennis Quaid and Kathleen Turner together for an adventure comedy sounds like a recipe for success. But Undercover Blues (Warner Home Video) has a script that's about as interesting and funny as a manual for assembling a roof-rack # Showgirls cast aside their kimonos to do men's work; Theatre; Screen Today

this fee now," he added. "I hope we can look back in two years and say it was money well spent. I owe Wimbledon a lot after five years, now I'm with a club that will challenge for the title next season - the support, the manager and the set-up is a recipe for success." The fee is also a Newcastle record but Keegan will break it again this week. Newcastle have matched Aston Villa's £6m bid for Les Ferdinand. Keegan will talk to the QPR striker after having a £5.5m offer for Inter

good to miss. Take a pinch of spicy Jennifer Lopez from Anaconda, add a dash of Sean Penn, who since Dead Man Walking is undoubtedly one of the most talented actors in the business. Then stir in Oscar-scooping director Olive Stone and it sounds like a recipe for success. But sadly, something doesn't quite click. Penn is perfect as a low-life petty crook on the run from the Mob. His car breaks down in a hick town in the middle of baking Arizona. During his enforced stay he is seduced by the eye-popping

just 20 months. Later he said: "I had total belief in Arsene and he delivered. Yes, it's been an unbelievable roller-coaster ride. Then, again, it just shows what you can achieve on broccoli and Evian water." Not exactly the old Arsenal diet but, as a recipe for success, a certain Double winner and food for considerable thought. WEMBLEY DREAM TEAM RATINGS ARSENAL DAVID SEAMAN: It may seem harsh but, with France in mind, his indecision on crosses is worrying. Mark (out of 10 # 6 NIGEL
Appendix 12: Sybaritic

is the need for something rich and sybaritic, a pudding that will satiate in not a quite weekend at home, but a sybaritic adventure in New York City. <p>
